Abstract not available for JP 2003534096 (T)

Abstract of corresponding document: **WO 0191648 (A1)**

The invention relates to instrumentation for introducing a hip cup comprising at least one molded cup part (36) and a shaft (40) to be connected thereto. Said shaft is to be guided through a bore in the femur (5) in the direction of the neck. The invention provides a drilling targeting device (15) for producing said bore correctly. The device has a fixing clip (16) on which a first positioning member (18) configured for placing on the head of the femur or the neck and a drill guide (23) can be displaced axially identically, in relation to each other and fixed.
